

Akashic Records Practitioner Training

Training Manual - Scope of Practice, Client Management & Contraindications

This is a separate document from the teaching content itself - it's the document IICT asks for alongside the curriculum outline.

1. Scope of Practice

Akashic Record reading and healing is a complementary energy modality. It is not, and is never presented as, a substitute for medical, psychiatric, psychological, or legal advice.

Graduates of this training agree to the following, every session, every client:

- **Never diagnose.** Not a physical condition, not a mental health condition, not a relationship, not a business decision. The Records offer perspective - the client makes their own decisions.
- **Never prescribe or advise against medical treatment.** Never suggest a client stop, delay, or avoid seeing a doctor, therapist, psychiatrist, or take/stop medication.
- **Never predict death, illness, or give guaranteed outcomes as fact.** Language stays in possibility and pattern, not certainty.
- **Always disclose what this is.** Before any paid session, the client understands this is a complementary practice, not a clinical or medical one.
- **Always refer out** when something beyond scope surfaces - a mental health crisis, a medical concern, a legal matter, anything requiring a licensed professional.

2. Client Management

Before the session

- **Informed consent:** the client knows what an Akashic Record reading/healing is, roughly what to expect, and that it's complementary - not medical or psychological treatment - before they book.
- **Intake screening:** a short set of questions before the first session (see Section 4) to flag anything that needs extra care or a referral instead.

During the session

- **Session structure:** opening (grounding, permission, opening the record), the working part (reading or healing), closing (closing the record cleanly, grounding the client back into their body), and a few minutes of integration before they leave the session.
- **Confidentiality:** everything shared - spoken or sensed energetically - stays confidential, the same standard as any other practitioner-client relationship.
- **Boundaries:** warmth without fostering dependency. The practitioner holds the container - they don't become the client's only source of guidance or support.
- **Transference awareness:** clients can project a lot onto a practitioner doing this kind of work. Graduates are taught to notice when a client's energy or expectation is attaching to them, and to hold the boundary kindly.

After the session

- **Aftercare guidance:** what a client might feel afterward (tender, emotional, tired, clear) and simple grounding suggestions for the following 24-48 hours.
- **Record keeping:** brief session notes kept per the practitioner's own business practice.

- **Grievance process:** a clear, simple way for a client to raise a concern with the practitioner directly.

3. Contraindications

Situations where a graduate should **not proceed with a session**, or should proceed only with modification and extra care:

Situation	Action
Active suicidal ideation or acute psychiatric crisis	Do not proceed. Refer immediately to emergency services or the client's mental health provider.
Active psychosis or severe dissociative disorder	Do not proceed without the involvement of the client's treating mental health professional.
Client under the influence of drugs or alcohol at time of session	Reschedule. Do not proceed.
Client currently in active trauma therapy	Proceed only with extra care, shorter sessions, and awareness that deep material may already be very close to the surface. Encourage them to loop in their therapist.
Client seeking this work specifically to avoid necessary medical or psychological treatment	Gently redirect. Don't become the reason someone avoids the help they actually need.
Minors	Only with informed parent/guardian consent and parent/guardian present or immediately available, per the practitioner's own business policy.

4. Risk Mitigation

Pre-session screening (suggested questions)

- Are you currently under the care of a doctor, psychiatrist, or therapist?
- Is there anything current for you emotionally or medically I should be gentle around today?
- Are you currently safe? (Standard, low-key check-in - not an interrogation.)

If a client becomes distressed mid-session

- Pause the session. Ground the client - breath, feet on the floor, eyes open if needed.
- Never leave a distressed client mid-record - close it properly first, then support them.
- Have a short list of local mental health resources / crisis lines ready to hand over if needed.

Practitioner self-regulation

- Grounding practice before and after every session - this isn't optional, it's how a practitioner stays clear enough to hold others.
- Graduates are taught their own closing/protection practice as part of Phase 1, and are expected to use it every session, not just in training.

Insurance

Every graduate is responsible for holding their own current public liability and professional indemnity insurance before offering paid sessions to the public.

5. Assessment Methods

Ties to Phase 5 - Certification Practicum in the program structure.

- **Practical assessment:** a supervised reading and a supervised healing session, assessed live.
- **Reflective component:** short case notes from practice sessions completed during the cohort, plus written responses to a small set of ethics/contraindication scenarios.
- **Pass standard:** demonstrates safe opening/closing practice, appropriate scope-of-practice language with a client, and correct identification of at least one contraindication scenario.

6. Mode of Delivery

- Live online cohort sessions, one per phase (or a small cluster per phase)
- Recorded sessions available afterward so nothing is lost if a live is missed
- Peer practice pods between live sessions for supervised practice
- Telegram (or similar) access between sessions for questions and support

Hours per phase are still to be attached (see program structure doc) before this manual + curriculum outline goes to IICT as a full application package.
